[Division – e.g., Engineering / Technology]
Company
Summer Analyst Program

Subject: [Role] Application – [Your Name]

Dear [Company] Recruiting Team,

I am a [X]th-year Computer Science student at [University] applying for the Summer Analyst role in the [Engineering/Technology] division. I am drawn to [Company] because of how it combines [technology at scale / data-driven engineering] with the rigor of a global financial institution – and specifically to the [Engineering] division because [specific reason].

In my [Project Name], I [built / analyzed] [X] using [tech], achieving [quantified result: reduced X by X% / processed X records / handled X requests]. I have completed [N] projects end-to-end with [metric]. I bring [skill relevant to engineering division: Python for data analysis / strong systems thinking / clean testing discipline]. [Optional, only if true: I spoke with [Name] at [event].]

I want to build software where correctness and scale matter under real financial constraints, and I believe the [Engineering] division is the best place to learn that discipline. [One honest reason tied to their work.]

I would welcome the opportunity to discuss my background further. Thank you for your consideration.

Sincerely,
[Your Name]
